Important Notes

1. **Dynamic Routes:** Next.js uses file-based routing, so routes are defined by the folder structure.
 2. **Regions:** Regions are configured dynamically via `globalConfig` and validated in the middleware.
 3. **Content:** Content is loaded dynamically from WordPress via REST API.
 4. **Filters:** Most listing pages support filters by country, region and thematic area.
 5. **Breadcrumbs:** Structural navigation present on most pages.
 6. **Layout:** All pages share the same layout (Header + Content + Footer) defined in `_app.tsx`.
